Aquatic Sports at Swimming Pool Monday

Good Program: Events F. I. All Ages

Arrangements now well under way, assure a night of real fun at the Swimming Pool next Monday evening when the annual Aquatic Sports will be held.

A good program of swimming and diving events for all ages of boys and girls as well as grown-ups, is now prepared. Besides these there will be a penny raffle and treasure hunt, novelty races, comic stunts, and fancy diving, for all of which good prizes will be given.

The program is billed to commence at 7:15 and a silver collection will be taken at the gate.

It was through the liberal response of our citizens at the sports last year that the pool was kept open all season and we are in the same position this season. For this reason it is hoped there will be a good attendance at the pool next Monday evening and that the collection will be a liberal one.

The committee is also anxious that all who can will take part in the different events and help make the evening the success it should be.

"Scandals" Is Film Triumph

Fox Production of Famous Geo. White Musical Is Superb

Setting a new standard for musical production, Fox Film's latest release, George White's "Scandals," comes to the Monarch Theatre, next Monday in all its gorgeous splendor. Presented for the first time on the talking screen, it is embellished with the spectacle, grandeur and beauty that only the camera can compass.

White himself enacts a part in the film, and he has recruited a galaxy of radio, stage and screen stars. Among the many notables in the film are Rudy Valle, Jimmy Durante, Alice Faye, Cliff Edwards, Gregory Patoff, Adrienne Ames, Dixie Dunbar and Gertrude Michael. Valle and Faye make a fine romantic team, and do splendidly with their roles. Miss Faye who has never been in films before, does an exceptionally fine piece of acting that stamps her as a coming star. The fun-making of Durante, Edwards and Dunbar will have you rolling in the aisles.

The film fairly brims over with spectacular scenes, dazzling dances, hit songs and comical blackouts. It is a colorful comedy, with 150 lovely "Scandals" wearing stunning costumes, dancing the intricate and fast-moving steps created by George Haine and singing the ten melodic songs hit written by three of the country's foremost song writers, Jack Yellen, Irving Caesar and Ray Henderson. Interspersed with the comedy songs, revues and dances is a tender romance that concerns two of the principals of the show.

Alberta Crop Report Shows Good Prospects

Issued By The Department of Agriculture, Edmonton

All crops in Alberta are at present making good progress under more or less ideal growing conditions, with the exception of the east-central section where early drought and the hopper have left their mark, and where July rains have not been as heavy or frequent as in other areas. In this section the grain crops will be light.

The past two weeks have been characterized by violent electrical disturbances and severe hail storms over a portion of central Alberta, where heavy damage has been done to crops in limited areas, this reaching as high as 75 to 100 per cent. in individual cases. The districts chiefly affected lie between Red Deer and Edmonton and east towards the Saskatchewan border. There has also been some damage in a few isolated districts in southern Alberta.

The Misses Alice Buchholz, Carol Sellhorn, Agnes Collard and Zella Bamforth returned on Wednesday from Sarnia, Rensselaer, where they have been camping with the C.G.I.T.

Redcliff Reminiscences

Taken From the Review File of July 23rd, 1915

Alberta went dry by a large majority on Wednesday, when the people voted against the proposed liquor act.

The local Truck factory sold four new trucks this week to the Militia department.

The ladies of the town have organized a Red Cross Society with the following officers: Pres. Mrs. Harbert Vice-Pres: Mrs. G. L. Gordon, Sec. Treas: Mrs. E. L. Stone.

ADDITIONAL LOCAL ITEMS

Johnny Jackman, of Seattle, was in town on Friday, renewing old acquaintances.

The local softball girls will play one of their postponed games with Safeways, in Medicine Hat tonight (Thursday).

Mrs. Gretchen, C.C.F. candidate in the by-election in Vancouver last Monday, was elected with 505 of a majority over Mr. Matheson the Liberal candidate.

Miss Margaret Smith, of Drumheller, who has been visiting her sister, Mrs. Henry Sangster, for a few weeks, is at present in the Medicine Hat hospital.

Mrs. R. N. Rose was taken to the Medicine Hat hospital last Monday and underwent a major operation Tuesday. Her many friends will be pleased to know she is now progressing favorably.

Plans for utilizing the Canadian surplus of wheat by Chem-L means to produce valuable by-products are being earnestly considered by a scientist at the Canadian Pulp and Paper Research Institute at McGill University.

St. Ambrose Sunday School held a very successful picnic on Wednesday afternoon of last week at Central Park. Medicine Hat. A good program of races for young and older ones was carried off splendidly by Rev. H. S. Hammett and Mrs. T. Fairhurst and all had a most enjoyable day.

"SEA CHANGE"

Captain R. G. Lettis (left) and Captain R. N. Stuart. Centre photo shows a section of the huge vessel that was launched at Victoria's Cove, Quebec, Saturday, June 30, to wave farewell to the popular "Jack" Lettis.

A famous Atlantic skipper severed his connection with the sea at the completion of voyage 44 of the Canadian Pacific ship, Empress of Britain.

Captain Robert Gilmour Lettis, first Commodore of Canada's big passenger fleet, first commander of the country's latest luxury liner, and friend of princes, Prime Ministers, and thousands of other travellers from all parts of the world, has been retired under the pension plan of the Canadian Pacific after 30 years in passenger service between Canada and the Old Country.

E. W. Beatty K.C., President of the Canadian Pacific, said in announcing his retirement: "His departure from the sea will be a loss that is balanced only by the gain which will accrue to the land in which he takes up his residence. While it is a regret that his friends in the Company say farewell to Commodore Lettis, and that his close association with us comes to an end, all I can say, join with me in felicitating him upon being still young enough to anticipate

Local Softball Girls Have Win and Loss

Win From New Club But Lose To Safeways

Redcliff Softball Girls appear to have more ups and downs than the busiest elevator boy in the biggest hotel in the country. In one game they go further up in the estimation of the fans with every innings and in the next it is all down. This was the case in the two league games played in the past week.

Last Thursday they put up a real game, against the New Club in Medicine Hat, forcing it to the tenth frame and winning out with two runs to the good.

But in the game against Safeways on Monday evening it was all down until the basement was reached and the score stood 24 to 5 for Safeways.

In Monday's game the conclusion of the fans was that the local girls were suffering from stage fright or had either lack of practice training.

A series of costly errors, lack of pep and wild throwing were all very noticeable in the last game and accounted for the big score made by the visitors.

The score in the New Club game was as follows:
New Club—411 010 110 1—10
Redcliff—011 201 081 3—12

The Safeways Game
Safeways—301 612 441—24
Redcliff—021 010 010—9

On the whole crop conditions in this district are fairly promising. Future conditions have

Local Pottery Finding Ready Market For Goods

Biggest Shipment Since Opening Made This Week

Business at the Alberta Pottery Plant here is rapidly growing. Orders for the excellent class of ware made at this plant are coming in from all quarters.

This week, one of the largest shipments since the plant opened operations, was made and prospects are most promising for a continuance of present increasing business.

Several improvements have been made to both the building and the equipment which greatly facilitates the turning out of their products and adds to the efficiency of the plant.

During the past few months the staff has been increased and if further developments continue as at present contemplated, further increases in the staff will be necessary before long.

Although this new industry started out when conditions generally were at the lowest ebb, it has continued to operate and grow until now it is in a very healthy condition and is finding a ready market for the goods it produces.

Ideal weather and a record attendance characterized the Annual Basket Picnic of Gordon Memorial Church School held in Central Park, Medicine Hat on Wednesday afternoon. The thanks of the officers and teachers are due to the many who loaned their cars, many of which had to make double trips. Besides the baskets abundance of ice cream and lemonade was distributed to the children, their parents and friends. A good program of races followed.

If you are going to see that fine picture "Eskimo" at the Monarch on Thursday or Friday be sure to be on hand for the beginning of the picture at 2:30 in the afternoon and 8:30 in the evening. On Saturday there will be a continuous performance.

Mr. R. Simpson arrived home on Sunday from Vancouver where he has been holidaying for the past two weeks. Master Kenneth, who accompanied his father, will remain in Calgary for a visit with his grandparents.

JUST FOR FUN
We women do talk too much, but even then we don't let half of us know.
—Lady Astor

Many people's tombstones should read "Died at 80, buried at 60."

Nothing is ever accomplished by a committee unless it consists of three members, one of whom happens to be sick and the other one absent.

We know a Scotsman who sees only on spur. He figures the other side will go anyway.

It is not so much the size of the dog in the fight as the size of the fight in the dog.
R. J. Young

Fine Quality—Black—Mixed—Green

"Fresh from the Gardens"

Object-Lesson Of Peace

Whatever may be the individual reaction to customs houses as between Canada and the United States, there is general unanimity upon the value of the lesson presented by the unique fact that not a gun nor a fort stands as provocation between the two countries throughout the whole extent of the international boundary.

This is so phenomenal a situation that it has attracted universal attention, been the subject of thousands of after-dinner and more ceremonious addresses, and stands to-day in a belittled world as a supreme example of what understanding and goodwill can do to preserve the peace of an immense border, to cement friendship between two great branches of the Anglo-Saxon family.

For more than 100 years, peace has existed between the Canadian and American peoples, and it is almost inconceivable that any act of facts or factors could disturb the serenity of the relationship existing between the nations north and south of the boundary line.

That goodwill and understanding has been of almost incalculable benefit to Canada. Billions of dollars of American money have been lavished in this country; hundreds of thousands of American people have come to settle in our midst. That money has helped materially in the development of Canada; those people have contributed their share to the upbuilding of a great Dominion of the British Crown. Together they have helped to achieve that economic diversity upon which Canada has been able to build its economic fabric on a national scale. These facts are evidence of the confidence with which the people of the sister country view the peace that exists to the north and testify to the keen appreciation they have of the solidarity of British institutions and British forms of government.

The unique and special character of this unfortified frontier, the amity between the two nations, and the close economic relations which exist to stand apart to trade rivalries, have attracted attention of the Carnegie Endowment for International Peace, which proposes now to make a special study of the British Crown. Together they have helped to achieve that economic diversity upon which Canada has been able to build its economic fabric on a national scale. These facts are evidence of the confidence with which the people of the sister country view the peace that exists to the north and testify to the keen appreciation they have of the solidarity of British institutions and British forms of government.

Whether or not any definite conclusions can be reached, whether or not a tangible cause can be deduced from the obvious facts, which might be made applicable as a general world principle, remains to be seen. The fact stands in their amazing isolation—peace, goodwill, and understanding are better weapons of defence than all the guns ever forged and all the forts ever built.

Superficially, at least, it would appear the fundamental background to the phenomenon is of the spirit, and for that reason, too intangible to lend itself to any concrete definition or be written into any formula for use of people who, similarly situated geographically, cannot get along together.

Whatever the finding, the lesson stands for the world to view—an irrefutable proof of what two nations may do if they have the will to live in peace and amity, convincing evidence that, notwithstanding their mutual goodwill by dispensing with the so-called weapons of the defence, neighbors may live in harmony without inciting those conditions of the mind or of the body politics, which lead to war.

Probe Working Of The Brain

Use High Radio Currents To Stop Functioning Of Limited Areas

How a University of California psychologist used high radio currents to stop the functioning of limited areas of the brain without interfering with the other parts, to study the purposes of particular centres of the brain, was described to the American Association for the Advancement of Science.

This somewhat startling method of probing the functional workings of the brain was based on the report of Dr. Clarence W. Brown of the university's psychology department. Dr. Brown suggested that the brain study should prove serviceable in solving anatomical and psychological problems in which a sudden controlled elimination of function is desired.

Fixed Price For Tobacco Growers

Imperial Tobacco Co. of Canada Limited Signs Tobacco Growers' Agreement

Gray Miller, president of the Imperial Tobacco Company of Canada, Ltd., states that "The Ontario tobacco growers are now financially assured for 1934 a price based on 2½¢ per lb. for an average crop. Although we are still without any assurance that other manufacturers will follow our lead, we have now agreed to meet the request of the growers for a 2½¢ average price, and we have given them our definite undertaking in writing to adhere to that basis for the 1934 crop, provided they can secure an agreement from the other manufacturers to pay the same price."

Looseness Of The Bowels During the Summer Months

It is seldom, during the summer, that most people are not troubled with some form of looseness of the bowels. Generally it develops into diarrhoea, dysentery or Summer Complaint, and has a tendency to weaken the system.

Do not check the discharges too suddenly. Do not stop the regularity of the bowels by taking Dr. Fowler's Extract of Wild Strawberry remedy that has been used by thousands of families during the past 48 years.

Do not accept a substitute. Be sure and get "Dr. Fowler's" you can talk for it.

Put up only by The T. Millers Co. Ltd., Toronto, Ont.

Modern War Implements

British Installing Rapid Fire Gun In Fighting Tanks

A big gun ere begins in aerial warfare. A 37-millimeter, rapid fire, automatic gun is being installed in some of the larger fighting planes of Great Britain and promises to have a "tremendous advantage" over the opponent carrying only the ordinary machine guns.

The heavy gun shoots more slowly, sending out its messages of death at the rate of only five in four minutes. But each shell weighs a pound and a half and is considered certain to disable any plane however slightly the contact is effected. And the slow-shooting heavy gun trusts to its long range to give it victory over the horrids. The small, light plane with its spitting machine gun is never to be permitted to come within effective range.

The report says: "Excellent results at both ground and air targets have been obtained at 2,000 yards." Presumably that gives British air fighters a start over all competitors of the great armament manufacturers: whose trade always has been international.

And even if the British government seizes complete control of that particular make, it can be certain that shortly after the usefulness of the invention has been demonstrated to arm makers of other nations will be out with guns for airplanes that can shoot shells as fast as bullets, and perhaps just a little faster.—Detroit News.

Praises Missionary Efforts

Doctor Credits Christianity With Great Progress In Asia

The change which Christianity wrought in the conditions of millions of women, and the part which Christian women took in working these changes, was the theme of an address at Highgate, South Africa, by Dr. J. R. Motl, president of the World Missionary Council, at a meeting of the women workers of all Christian denominations.

"The effect of Christian missions upon the lives of women would be sufficient evidence, he said, to convince him of the worth of foreign missions. It was the theme of an address at Highgate, South Africa, by Dr. J. R. Motl, president of the World Missionary Council, at a meeting of the women workers of all Christian denominations.

"The effect of Christian missions upon the lives of women would be sufficient evidence, he said, to convince him of the worth of foreign missions. It was the theme of an address at Highgate, South Africa, by Dr. J. R. Motl, president of the World Missionary Council, at a meeting of the women workers of all Christian denominations.

Fortune Has String Attached

Man Must Marry By Christmas Eve To Win \$100,000

If John Francis Gallagher, of Paris unknown, takes into himself a wife on or before Dec. 25, 1934, and returns to his home in Canada, he will win \$100,000 from the sum of his aunt, Mrs. R. H. 143 Well Hall Road, Eitham, London, Eng.

The offer of wealth was disclosed in a letter from Mrs. Sarah to Acting Mayor J. A. McKersher of Winnipeg. She said she was obliged to make a public appeal as to her nephew's whereabouts because she has lost all trace of him several years ago.

Mrs. Sarah, in her letter, said the last address she had of her nephew was box 130, Carleton, Alta., and general delivery to Prince Albert. She said Gallagher is not located and married by the date set. Mrs. Sarah said she would bequest all her real and personal property to the church and charity.

Cost Of Farm Production

Dominion Agricultural Bulletin on prairie farm costs, says: A half-section grain farm in the prairie province, when operated by one man and seven horses would be able to produce wheat at 75¢ per bushel, while, when operated with a 10 h.p. tractor and two horses, the cost would be increased to 85¢ per bushel.

Proved Idea Wrong

Remarkably vigorous tomato plants have been grown out of doors all through the winter in Canada, and daylight for six weeks, despite the reports that daily artificial, or artificial and skylight exposure of 17 hours a day, were more injurious to tomatoes.

Onions plants are plants which can grow in but one life condition.

Synthetic Rubber

Automobile Tires Now Made In U.S. From New Substitute

The first American synthetic rubber automobile tires which look like real rubber and wear like it as well, were announced recently.

They were described as a potential checkmate against excessive rubber prices and a guarantee of American rubber independence in war-time. The synthetic rubber now costs about \$1 a pound, against 15 cents for foreign real rubber, which has ranged from five cents to more than a dollar.

The announcement was made jointly by the Dupont Company, makers of the synthetic rubber, and the Dayton Rubber Manufacturing Company, of Dayton, Ohio, making the tires.

The synthetic rubber is made of acetylene, salt and water. The acetylene comes from coal and limestone, so that all the ingredients are home products.

J. A. MacMillan, president of the Dayton company, issued this statement: "These tires have been subjected to rigid laboratory and road tests and have proved themselves fully the equal of rubber built of natural rubber. They have been placed on automobiles opposite tires built of natural rubber and have been subjected to severe tests."

Use Of Radium

Dr. Shepley Deals With Advance Made In Use Of This Medium In Recent Years

"It is definitely recognized today that the scope of radium therapy in cancer has so widened that it now embraces a very large per centage of the cancer field," Dr. E. R. Shepley, radiotherapist for the Saskatchewan cancer commission, of Saskatoon, told delegates to the annual meeting of the American Cancer Society at Bombay. His paper dealt with the advances made in the use of radium as a therapeutic agent since its discovery in 1910.

"Because of late recognition," Dr. Shepley said, "a large per centage of cancer cannot be considered from the viewpoint of curative attack. In those that have been given curative treatment previously, possibly not more than one-third are cured. From these groups, a large number require palliative radiotherapy." This is a sad picture of cancer because such procedure reduces suffering even if not effecting a cure, Dr. Shepley explained.

Will Regulate Tariffs

Dr. Shoemaker Explains Powers Given To Roosevelt

Economic problems, including tariff questions, would be more smoothly handled by the United States, Dr. E. R. Shoemaker, former Canadian representative of the United States at the peace conference in 1918 and at present professor of international law at Columbia University, New York City, told the Ottawa Canadian Club. Formerly these powers were the prerogative of the United States Congress.

Tariffs, under executive decree, would operate without the intrusion of political pressures formerly seen. Dr. Shoemaker said. His audience included Prime Minister R. B. Bennett, Sir Robert Borden, wartime premier, and Rt. Hon. Mackenzie King, former prime minister and Liberal leader in the House of Commons.

Gold In Canada

Gold is found in every province of Canada except Prince Edward Island. All the time the mine is in various stages of completion are moving with the conveyor from one table to another. At full pressure the mine can be reduced, it is said, to fifty-five seconds!

Gift For British Admiralty

Charles Courtney, master locksmith, arrived in London from the United States and said he would present to the Admiralty certain rings and articles of wearing apparel belonging to the late Lord Kitchener. Courtney said he had the rings and articles of wearing apparel belonging to the late Lord Kitchener. Courtney said he had the rings and articles of wearing apparel belonging to the late Lord Kitchener.

Husband Needed Sympathy

In granting a divorce to a talkative woman at Toledo, Ohio, Judge James Austin explained that it was given "as a favor to her husband." Mrs. M. M. Austin, who had been stopped by judges, attorneys or bailiffs after she began a recital of her domestic affairs. The husband did not contest the action.

PLUG SMOKING TOBACCO

Regular White Elephant

Automatic Game Master From India Lets Of Trouble

Rev. Ernest M. Moffatt, central treasurer of the Methodist Episcopal Church in India, was a badly troubled man when he arrived from Europe on the liner American Trader, with a .45 calibre automatic revolver.

The automatic became a source of trouble to Mr. Moffatt before he left Bombay. The weapon was taken there by a bishop's sister, whose American friends felt she would need something to protect herself when she was so far from genteel Oklahoma.

It is, however, illegal to have a pistol in India. And the police refused to register the pistol because the law was the same as that of the States.

The bishop's sister appealed to Mr. Moffatt to take the pistol back to the United States which he said. He had it in his possession for two weeks before he left India with his wife and their children. And the police kept a constant watch on him, which was most embarrassing.

When he arrived in the United States he listed the pistol on his customs declaration. The customs agents said they were not interested. He felt relieved that he was not violating any law, but the helpful customs agents said: "While the pistol does not violate our law, it violates the New York State law, of course."

Mr. Moffatt threw up his hands. "I am," he said with determination, "taking it to the nearest police station."

A Miracle Of Speed

Nineteen Girls In London Factory Make Shift In Minute

Those who refuse to believe that a shift with all its stitching, trimming, button-holing, and so forth can be made in one minute, should go to a building in London, and see nineteen girls, seated at nineteen tables, separated into two blocks, by a moving conveyor, performing this miracle of speed. Each girl performs one operation. One sews cuffs, another makes collars, another button-holes. All the time the shirt is in various stages of completion are moving with the conveyor from one table to another. At full pressure the minute can be reduced, it is said, to fifty-five seconds!

Gift For British Admiralty

Charles Courtney, master locksmith, arrived in London from the United States and said he would present to the Admiralty certain rings and articles of wearing apparel belonging to the late Lord Kitchener. Courtney said he had the rings and articles of wearing apparel belonging to the late Lord Kitchener.

In granting a divorce to a talkative woman at Toledo, Ohio, Judge James Austin explained that it was given "as a favor to her husband." Mrs. M. M. Austin, who had been stopped by judges, attorneys or bailiffs after she began a recital of her domestic affairs. The husband did not contest the action.

Population Of India

Showed Increase Of Thirty-Four Million In Ten Years

Dr. J. H. Hutton, C.I.E., I.C.S., chief commissioner for the census of 1931, in his census report wrote that for long China was considered to hold the greatest aggregate of human beings in the world more or less under the same administration, but India's population now even exceeds the latest estimate of the population of China.

The difference between the kind of government China has had during the present century and the kind of government that India has had could not be better illustrated. The census of 1931 gave India a population of 353 millions or an increase since 1921 of just under 34 millions. The increase in the ten years from 1921 to 1931 is alone almost equal to the total population of France or Italy and much greater than that of important European powers like Poland and Spain.

If there was an increase of 34 millions between 1921 and 1931, a similar or even greater increase between 1931 and 1941, bringing India's population almost up to the 400 million mark which is envisaged by Sir John Megaw, cannot be dismissed as impossible.—Calcutta, Statesman.

Kept Old Appointment

Friends Met In Denver On Schedule After Twenty Years

Three men entered the office of a Denver newspaper promptly at 11 o'clock on a recent morning to keep a rendezvous made 20 years ago. The trio consisted of Earl E. Anderson of St. Cloud, California, H. H. Brockley of Denver and F. A. Donk of Holyoke, Colo.

They explained that one night in 1914, while all were living in Denver, they made an appointment to meet in that particular building a score of years later.

W. H. U. 2055

Large Volume Of New Wealth Is Brought To Canada Annually By Tourists From Other Countries

In initiating measures looking to the stimulation of tourist traffic the Senate gives further evidence of its determination to make good use of seasonal time.

The proposal advanced by Senator W. H. Dennis, of Halifax, that there should be federal co-operation with the present promotion agencies commended itself to both party leaders, and to his fellow members generally.

The volume of the new wealth that is brought to Canada annually by its touring visitors was shown by several of the speakers to reach impressive totals, exceeding the net value of many of the larger native industries.

Systems of public highways have been constructed at great expense, Senator Dennis pointed out, and they should be utilized to the best advantage of the country. Certainly the extension of good roads to places which only a few years ago were considered remote should add substantially to the attractions offered by the Dominion. Large new areas of varied charm and interest have become easy of access.

There is force in logic also, in the suggestion that fresh efforts should be made to promote the idea of "Ries Canada First" among our own people. As Senator Meighen observed, more Canadians are travelling in the United States than Americans travelling in Canada, though there was no question of the superiority of the Dominion's attractions. A "favorable balance" of tourist trade is not a mere paper balance. It is "cash in hand."

Strange twists and turns in international exchange of value in the world have influenced profoundly the tourist movements of recent years. The flow from this continent to the Old World has dwindled since the pre-depression days. A strange turn in the tide was marked by the arrival in New York of a liner carrying 12 "dollar tourists" from Europe. The visitors, who include Belgians, Germans and French, are permitted five days of "rubber-checking" in New York by the special-rate arrangement.

Canada's "yoo" train plan has provided low-cost facilities for travel within the country. Is it possible that the transcontinental excursion will make itself widely popular as an inexpensive means of sightseeing? The new low Americanism from Europe is sacrificed to the decline of travel abroad. If there is to be an era of mass travel Canada should claim its share of it.

The personnel of the committee appointed by the senate to investigate and report, is representative of both east and west. Its studies should be helpful generally to the provincial and local agencies of promotion now operating.—Toronto Globe.

Find Grain-Growing Expensive

Europe May Decide In Time To Buy Canadian Wheat

Jackson Dodds, joint general manager of the Bank of Montreal and president of the Canadian Bankers' Association, was a guest of honor at the Canada Club while on a visit to the Old Land. During his remarks he pointed out that the production of wheat in Europe is on an uneconomical basis, and prophesied that with the return of more normal times various nations are likely to conclude that the purchase of that cereal from this country and other grain-producing lands, is the most sensible and cheaper plan. It is to be sincerely hoped that his prognostication comes true.—Brandon Expositor.

A Strange Deal

In a contract bridge game at Boulder, Colorado, Dr. Leonard H. Pratt of Boulder, and R. C. Martin of Denver, partners, held all the red cards to the deck. Their wives, against whom they were playing, held the black. The women got the bid at seven. They were vulnerable and by making the bid on a "laydown," scored 3,400 points and received a 700 premium for a "rubber" game.

Fast Fire Engine

What is believed to be the fastest fire engine in the world has just been installed at the race track in Brooklands, England. It can attain a speed of more than 100 miles an hour. In recent tests it was demonstrated that the engine can reach any part of the two-and-a-half-mile grand circuit within one and a half minutes.

Ghost Town In Carolina

Abandoned Forty Years Ago But Reason Not Known

In the heart of North Carolina in a brush-grown valley lies a mysterious, deserted village—a "ghost town" abandoned by its inhabitants 40 years ago for reasons unknown.

Remains of the houses are still in the once flourishing municipality of Parkwood, five miles from Carthage, and so are the bush-tangled streets, set in the beautiful valley through which flows a winding stream dear to a fisherman's soul.

But for the last 40 years no persons have lived in what now is the rendezvous of bats and birds and makes. Residents of this community profess not to know why the city never left the place whose principal industry was the manufacture of millstones.

The time-stained register of the Grand Hotel carries its last entry on April 2, 1891—Moses Fisher of Baltimore, Md. He, with horse and driver, cost his firm 75 cents for the night. The man got the clerk accepting the bill hid in its own illegitimacy.

By Ruth Rogers

Had Thirty-Year Start

Records Indicate Brantford, Ontario, Had First Woman Journalist

When it comes to a show-down as to who was the first woman journalist on the continent, Brantford, Ontario, will plump in favor of Mrs. Alice Lemmon Keeler Hart, who started writing editorials a century ago for Brantford's earliest journal, the Sentinel.

Rival claims by Mrs. Anne Royall, an American, and Mrs. Kate Mansak, Montreal, being the collection by F. D. Deville in the Brantford Expositor that Mrs. Hart's career antedated both of these by about 30 years.

Her entrance into newspaper life was due to her first husband, David Keeler, being induced by Nathan Gage, shoe store proprietor in the infant village of Brantford, to come from Rochester, N.Y., in 1839 and establish a paper. Next year Keeler met, wooed and in a few weeks wed Alice Lemmon, recently arrived with her parents from Ireland. The young bride started writing editorials and Keeler, realizing her talent, encouraged her work.

Keeler did not stay long in Brantford, however. Belonging to what George Brown, founder of the Globe, used to call "the intelligent yomanry of Upper Canada," he championed the rebel cause of William Lyon Mackenzie. Little too warmly. When the uprising failed in 1837 he fled to Rochester, where he lived in exile till his death in 1848.

In a manner reminiscent of Edna Ferber's heroine in "Climax," Mrs. Keeler carried on the editing of the paper, and in 1850 her father, Thomas Lemmon, took it over, changing the name to "the Brantford Courier and Grand Mercantile Advertiser." Shortly after Keeler's death, his widow married D'Arcy Hart, but continued to write her editorials. Her fame by this time travelled farther than the Brant county hamlet. She lived to an advanced age.

New Type Of Plane

Will Be Propelled With Paddle Wheels Is Prediction

Aeroplane having neither wings nor screw propellers were pictured to the American association, Society of Mechanical Engineers, at Berkeley, California, as the possible aerial craft of tomorrow, by M. K. Kirkland, professor of aeronautical engineering at the University of Washington.

Professor Kirkland outlined the essential feature of this new type of aircraft as resembling nothing so much as the time-tested ferry boat, propelled with paddle wheels. Air instead of water would be the ocean.

Radio is dangerous to workers who come within 10 feet of the powerful element.

Created Wheat Grass

Supply Of Seed Falls Far Short Of The Demand

In spite of the fact that there is considerable wheat grass seed being produced in Western Canada, the supply is still far short of the demand. This is due in part to severe drought which has visited the prairie sections of Saskatchewan and Alberta during the last few years, since created wheat grass has had its widest distribution in that area. These conditions have demonstrated its exceptional drought resistance and ability to produce in a dry climate, but while the plants were able to make substantial growth on available spring moisture and to produce heads, the supply of moisture was frequently insufficient to fill the seed.

Demand for seed of the "Palmyra" strain is most insistent. Seed distribution of this variety has been quite general so that, although both ordinary created wheat and the "Palmyra" variety have grown in the semi-arid sections of the south, the latter has been grown almost exclusively in the northern districts, and these have been more favourably situated with respect to moisture.

Good seed wheat, therefore, has been obtained therefore of "Palmyra" created wheat grass and the seed has been sold at a considerable premium over ordinary seed. For these reasons it would appear that seed stocks produced in Western Canada will soon consist largely of the improved variety.—Created Wheat Grass bulletin, Dominion Department of Agriculture.

Danger From Hooper Poison

Careless Handling Results In The Loss Of Livestock

Careless handling of grasshopper poisons has caused the death of a number of animals in the Saskatoon district and constitutes a serious danger to human beings. Dr. Norman Wright, veterinarian, warns. Five cattle, four horses and a dog have died during the past few weeks within ten miles of the city of Saskatoon from this cause.

Should the risk some people take, Dr. Wright points out that he saw a farmer driving out of the city with a wagon containing bags of four and other groceries. Over the top of each wagon box were planks on which the farmer had thrown some bags of the wet poisoned hay. The water from this was dripping down on the floor. In the case of the dog, the farmer was a consumer of electricity and yet even our best scientists do not know, even in a small way, how electricity passes through one. We rub our hands together; we say they are warmed by friction, and yet we have no knowledge to-day of the magnetism of friction. We know we have ball bearings, but as to the exact action of lubrication little, if any.

FAMOUS AGRICULTURAL COLLEGE CELEBRATES JUBILEE

On June 22nd and 23rd the Ontario Agricultural College at Guelph, Ontario, celebrated the Diamond Jubilee of its founding. Established in 1874 with an enrolment of twenty-eight students, there are now twenty-six large buildings with approximately one hundred lecture rooms and laboratories. The recreation grounds include, besides the college campus, a magnificent park and recreation field of more than two hundred acres, and the farm of the college comprises more than seven hundred acres of high-class land. Herds and flocks of livestock to the extent of more than two hundred animals are kept for class work and research. The development of O.A.C. at Guelph and O.A.C. varieties of wheat and oats are concrete evidence of the great value of the experimental work done at the college, which has meant many millions of dollars to farmers in Canada and the United States. Our layout shows the two buildings of the Ontario Agricultural College. Top, is the Dairy Building; bottom, is the Field Husbandry Building; and inset is a picture of Dr. G. E. Christie, who is president of the College.

Increase Of Scientific Knowledge Will Be Important Factor In Stimulation Of World Recovery

The whole world is now absorbed in a study of social problems. The ultimate aim of all industry, science, government and sociology is for a better life—better living conditions; better health; better government; better homes; in fact, for better everything.

It is my impression that the immediate future will bring a great change in our mental attitude toward the physical world, that it will bring into existence new pieces of information which will completely change our scientific viewpoint. It is not what we know that is so important. It is what we do not know. Most of what we know can be found in libraries, in the minds of people and in processes which they carry out. But we have no conception of what a small per centage this is to what there is yet to know.

As an illustration, we perhaps do not recognize it, but everything that ever moved on the earth has been moved by energy which came directly from the sun. Our coal and oil deposits, our forests, our crops and everything that lives on the earth is simply an energy conversion from the sun. We do not know, except in a very superficial way, how the energy which is given out by the sun is transmitted to the earth. We do not know how plants pick up this energy and convert the inanimate carbon dioxide and water into the vital materials so necessary for our existence. This, when understood, will open up an entirely new conception of things that can be done.

It is not difficult with this information in hand to predict the propulsion of airplanes by radiated energy with the power plants located on the ground. Nor is it difficult to envisage the entire system of aerial navigation, which will be unaffected by fog and general weather conditions.

So much of our information to-day does not rest on a basis of understanding. It is known to us only by definition. We say we can see through a pane of glass because it is transparent, and yet we do not know the first principle of how light is transmitted through glass. We say a copper wire is a conductor of electricity and yet even our best scientists do not know, even in a small way, how electricity passes through one. We rub our hands together; we say they are warmed by friction, and yet we have no knowledge to-day of the magnetism of friction. We know we have ball bearings, but as to the exact action of lubrication little, if any.

thing is known, and in the commonplace things that are used in the electric industry, such as magnets, electric charges, etc., we have only a very superficial knowledge. We know there are things out there, however, which we can use to our effect.

Each year we discover new things, which a short time ago we did not even know existed. I cannot help feeling that in a very short time we are going to break loose another great piece of basic information which will keep us industrially busy for a great many years to come. I think if we write down as our immediate problem those things with which we are disatisfied we have a long list of things to do. We can make our own way out of this world and take it out of the air; we are already conducting our houses; we are already conducting our lives; and an unapproached number of other things to do.

There are many people who doubt if human progress can continue on its present standards. Still others think that we have to go back to lower standards of living because of the way we are going on, present difficulty is to regard and not backward. Our civilization as a whole is new. It is itself an experiment and just because we believe in it, we are not discouraged. It is not a difficulty is no cause for despair. We must find out what is wrong and then remedy it, but we must not give up hope of a better and more virtuous life.—Charles F. Kettering, Vice-President in Charge of Research, General Motors Corporation.

World's Sheep And Wool Situation

Industry Benefited By Improvement In The Demand For Wool

Canada, of course, is not a competitor in the world's mutton trade, says the 14th Annual Market Review of the livestock and meat trade, published by the Dominion Department of Agriculture. At the same time Canada is a factor to the extent that any changes for better or worse are reflected in the Canadian market. In so far as wool is concerned, Canada is a real factor in the trade as a whole, and the industry has benefited in no small degree from the recent improvement in the consumption of wool. Favourable lambing seasons in the British major mutton and wool producing countries promise an appreciable increase in output during the ensuing season. Conditions are particularly favourable in Australia and New Zealand. Improvement in the wool market has been almost spectacular and promises to continue. The advance in values at wool sales early in 1934, added to the improvement in greater returns from the industry and the appreciation in price combined with more favourable seasons, have brightened the situation most remarkably.

Dangerous To Reduce

Women Who Fast For Sake Of Slender Figure Are Taking Risks

Women who fast or starve themselves for the sake of a slender figure do so at a greater risk to their health than do men undergoing similar deprivations, the American Association for the Advancement of Science was told by Prof. H. J. Deuel, of the University of Southern California Medical school.

"Women develop a much more pronounced acidosis during a week's fast than do men," Dr. Deuel said. "This condition is associated with the inability of females to oxidize fat during starvation as completely as the male subject is able to do."

Fewer In Chaff

According to one of the cereal chemists who addressed a millers' and bakers' convention in Toronto recently, an immense source of power lies in chaff and straw left over from cereal crops. While it might be all right for a horse or a slender figure to do so, it is a waste of power for these for heat producing purposes, farmers can use them to much better advantage lightening up their soils.

THURSDAY, JULY 19th. 1934

In a speech in the House of Commons during the last session Henri Bourassa said: "Mutual help, tolerance and forbearance between churches, classes and races, between provinces, cities, towns and rural communities, and also between political parties and factions are today more essential than ever in Canada and elsewhere. Without that moral accord, no law, no measure, no plan of financial or social reform, can succeed and save society."

This is sound reasoning which should be followed not only by leaders in all walks of life and of all sects, but by individuals as well. If we are to emerge from our present chaotic condition.

"You sweep out, you trim the windows, you dust off the counters, you make up new price cards, you unpack and arrange new stock, you plan your merchandise showings, you do these and a hundred other necessary jobs REGULARLY in the normal conduct of your business.

"But how about the biggest job of all—contacting the people and telling them repeatedly that you are in business and have the goods they need. Do you do that REGULARLY? Do you figure you are going to get your share of the available business if you don't tell folks about your merchandise or your service at REGULAR intervals instead of doing the job sporadically or not at all?

"By all known tests, experience and thousands of records, the acknowledged best of a medium for REGULARITY is advertising in the local news-

paper. A newspaper going REGULARLY into the homes of your possible customers, not only in your city but the surrounding territory as well, makes it easy enough for anyone to see how your local newspaper offers you the finest kind of a vehicle for carrying your business message REGULARLY to the people.

"And don't think these folks won't miss your REGULARITY of advertising. They look for their newspaper REGULARLY, READ IT REGULARLY, study its advertising yours, if it's there REGULARLY.

"And what's more, you'll find they are buying fairly REGULARLY, too, if you'll just check up, especially with the advertisers who use space REGULARLY.

"YOURS FOR MORE REGULARITY IN ADVERTISING"

THE REDCLIFF REVIEW

TOWN OF REDCLIFF

The Local Tax Arrears

Consolidation Act 1934

The Council of the Town of Redcliff have by resolution declared that the above Act shall be applicable to the Town of Redcliff, and any person wishing to take advantage of the provisions of the above Act, should on or before the first day of August, 1934, apply to the Town in writing, (accompanied by the sum of one dollar, which will be applied on applicant's taxes in case the application is granted) to consolidate the arrears of taxes due on any piece of property, and such application will be duly considered by Council.

The Act only applies to cases where more than one year's taxes were in arrears as at the 1st of January, 1934. Full particulars of the payment and discounts under the above Act can be obtained at the office of the Secretary-Treasurer.

To those who properly come under the provisions of this Act all proceedings under the Tax Recovery Act, 1923, for sale or otherwise, are suspended in respect to the properties involved, and while the consolidation agreement is in force.

A FAIR QUESTION

Stirred by the growing tendency of his fellow townsmen to use the newspaper for every thing but advertising, a Dakota editor recently asked them in a page one box:

"If a member of your family died, would you send out the obituary in a circular letter? If your wife entertained, would you run a slide on the screen of the movie show? If you were to enlarge your store, would you tell folks in a hotel register? If you were to have a wedding at your house, would you tack a notice on a telephone post?

Then why in Heck don't you put your advertising in the newspaper, too?"

Sky Line Trail Hikers

"To Yoho we will go," is the slogan of the Sky Line Trail Hikers of the Canadian Rockies for the coming season and the dates fixed are Friday, August 3 to Monday, August 6. This will enable those taking part to go, if they wish, on the Trail Ride (July 25-30) or participate in the Annual Camp of the Alpine Club of Canada (July 16-21) and follow on with the Trail Hike.

Plans at present are to meet at Emerald Lake Chalet on the morning of August 2, starting out

after lunch over the Yoho Pass to the Yoho Valley Chalet-Burgess Camp, seven miles distant. The first night will be spent in that camp and the morning hike on the second day will be to Twin Falls. In the afternoon there will be a hike over the upper meadows, to the Yoho Glacier Camp for this and also the second night will be at the Twin Falls Cabin, supplemented by tent accommodation. The third day will be spent hiking through the Little Yoho Valley, returning to Twin

Falls Cabin. The fourth day there will be a hike over the high line trail back to the Yoho Valley Chalet-Burgess Camp where the Pow-Wow will be held in the afternoon. Then, those who wish to catch train or bus for Lake Louise or Banff can do so while there is the choice of staying over and hiking over Burgess Pass to Field or continuing their exploration of the beautiful Yoho Valley. A large turn-out is expected following the successful hike of last year.

Icebergs Of The Antarctic

Whiter And More Beautiful Than Those In North

Admiral Byrd in his recent voyage along the hidden front of the Antarctic Continent east of King Edward VII Land reported that he apparently the greatest number of icebergs ever seen in one day, but other Antarctic expeditions have also reported vast groups of bergs at one time. This particular stretch of unknown shore is probably the greatest breeder of bergs in the world.

To the east of Byrd's position, Charcot saw more than 5,000 bergs in forty-eight hours; in the whole summer season he saw 10,000. Recent recorded "numberless" bergs in one day west of Cape Adare, and Shackleton thousands in one day in the Ross Sea.

The distinctive Antarctic berg is very different from the conventional glacier berg, which is the only kind seen in the north polar region, though glacier bergs also exist in the Antarctic. But the bergs which are so beautiful and vary in size and shape are the Antarctic traveler with awe are the flat, tabular masses which break off from the shelf ice. They are also whiter and, as their appearance is less than that of the glacier bergs, they float higher out of the water. They are enormous. The largest recorded tabular berg was forty miles long, reported by Mawson.

When a squadron of these shining white islands parades across the sea on a sunny day, waves dashing against their sides, they are very impressive. Their sharp, jagged edges, the season are sharp and clean cut with a few caves of a deep-blue color, eaten into them along the water line. Sometimes, near the water, they are a pale yellow.

Toward the end of the season, when the sun and warm air have had their corrosive effect, the giant bergs take on strange and often beautiful forms. They may be washed almost to the water's edge, with columns rising from the moovy base instead of the solid mass which was there when the berg started north. Or an arch so high that a ship could sail through it has been found. Turbils and castles, vast caves, pillars and steeples, all sorts of forms which the careless etching of the weather has produced, can be seen. And the caves are the deepest, softest blue, a blue that is all the more striking because of its white setting.

Proud Of Their Age

Washington State Women Golfers Readily Admit Fifty And Over Women golfers of Washington state are willing to admit their age. They have been bragging about it for the Washington State Women's Golf Association to inaugurate a women's tournament for women fifty and over to the amusement of many of the members. 30 female players readily admitted they were 60 or more.

As an eligible competitor in the elderly women are proud of the fact that they still can shoot a good game at 100.

"We would rather the world did know our age when we are still carrying our clubs around after reaching the half-century mark," she said.

Will Start Growth Earlier

Scientific Food Makes Seed Germinate Ahead of Schedule

A scientific fact that is almost the equivalent of abolishing winter—a new kind of rejuvenation process for seeds that promises to be of immediate benefit to the farmer—has been accomplished by the department of agriculture.

It has found that the longer wavelengths of light, the red, orange and yellow rays, have the almost miraculous power of rousing seeds from their winter's dormant state, a sort of living death, and start them growing several months ahead of schedule. This new process of "rejuvenation" was discovered and developed by Dr. L. H. Flint.

Amplifier Heart Beat
Heart beats of infants will be audible at a distance of 50 feet if an apparatus being perfected by scientists at Anshich College, Yellow Springs, Ohio, works successfully. Dr. L. W. Rostag, who is directing research workers in the construction of the machine, says the heart sounds will be amplified and recorded on a moving ribbon of paper.

The entire human race could be wiped off the earth with only 60 pounds of the toxic gas called the deadly food-poisoning known as botulin.

W. N. U. 2063

FAMOUS OCEAN LINER MAURETANIA

The veteran, Cunard liner, Mauretania, the Aristocrat of the Atlantic, and former holder of the "blue ribbon" of the North Atlantic, probably will be converted into one of the fastest cabin liners afloat, it was learned. Her days as a luxury liner are numbered. At the end of this month she will leave Southampton for a four-month pleasure cruise and this may be her last voyage of this nature. The most yacht-like of all the great ships afloat, the Mauretania is 190 feet long, with a gross tonnage of 30,704 tons. She was built in 1907 and from 1910 to 1929 was the fastest liner on the Atlantic route. Our top picture shows the Mauretania starting on one of her trips, while left, a vista view of the Public Rooms from the A deck taken from the Lounges.

Carless smokers caught 31 first in Nova Scotia in the first quarter of 1934.

Not Given Much Space

Old Scottish Paper Allowed News Home One Paragraph

Were newspapers of the early 18th century generally minute or did the Scots practice thrift in the matter of newspapers? The question arose when a copy of "The Scots Courant," dated May 9 to 11, 1711, was presented to The New Brunswick Museum. Printed on both sides in two columns, the single-sheet edition measures five inches by ten.

The publication covered a wide range of news two centuries ago, although each topic received only one small paragraph. With evident station, the editor announced that "two mails from Flanders and one from Holland came this morning." Some of the items, however, were dated April 23.

The "bad story," an account of Peter the Great's movements, said: "The czar, who was expected at Leopold from Sultana, is gone back from Moscow to quell an insurrection. The last letter from Podolia says the Palatine of Kow and the Son of the Tartar Han, have been several places on the frontier and have laid siege to Palatinas between Blackishlow and Zarlow. They are joined by great numbers of soldiers. . . . The Prince has defeated two Muscovite detachments."

Other European dispatches told of wars, war rumors and internal strife. A reference to the sitting of parliament at London revealed the political situation of the publication: "The Resolution of the Parliament for making good the public debts and deficiencies which amount to about nine millions, have given an universal satisfaction of the wisdom, justice and honor of the present House of Commons."

Birds Are Imitative

Jay Is Most Clever, Mimic And Imitative

Birds from the ostrich down are very imitative. The ostrich where he lives, alone in a desert, in a country where the lions should be roars. The reason for this, we are reminded, is that imitating the lion roar, he gradually learns to roar himself. And small birds, bunting imitate pipit, and green finches imitate yellow hammer. They use their food in winter together and they gradually steal each other's call. The Jay is an imitative imitator. Some jays will include in the repertory not only the cries of songs of other birds, but also the noise of the tongs and the neigh of a horse. Even the nightingale imitates. In a nightingale's song it is sometimes heard the distinct phrases he has borrowed from other birds.

Powerful Microscope

A German scientist claims magnification of 400,000 times, sufficient to see the atom and electron, with his new microscope, in which he uses invisible light rays to make the tiniest matter visible.

If farmers are to be paid for not growing wheat, and workers for not working, why not pay merchants who don't do any business?

Earth's Lowest Spot

Dead Sea Lies 1,300 Feet Below Sea Level

The Dead Sea has been well named. This strange lake in Palestine, which according to tradition, is supposed to cover the lower of Sodom and Gomorrah, lies 1,300 feet below sea level, the lowest spot on the earth's surface. Supporting no life with the exception of a few microbes surrounded by an intensely hot and rarefied atmosphere, this body of water has been the subject of many myths and superstitions. It is about forty-seven miles long and from five to ten miles wide, covering an area of about 340 square miles. The Dead Sea apparently has no outlet and is fed by the Jordan and a few other rivers, which bring various salts with the 4,000,000 tons of water they pour into it daily. This water evaporates the salt remains. The south shore has an extraordinary depth of rock salt, seven miles long and about 300 feet high, called the Khaim Uddin (Ridge of Sodom). The Sea is six times as salty as that of the Atlantic Ocean and contains 187 pounds of salt to the ton. Bulk for bulk, it is heavier than the human body, which therefore does not sink in it.

Willing To Oblige

Little Betty had been allowed to stay up to supper one night the night understanding that she should behave very well and not ask for anything on the table.

When dessert came all the guests were attended to, but she was overlooked. "The sat depending for a time, and then was struck by a bright idea. She exclaimed in a loud voice, 'Who wants a clean plate!'"

Farmer: "If things get too bad, we can eat our forest preserves." City Boy: "You're nothing on us; we can eat our traffic jams."

FANCFUL FABLES

Destroyers Of Wealth

Rate Invading Western Canada Are Menace To Grain

People in Western Canada are beginning to recognize that a new country possesses numerous advantages that seem gradually to disappear with the advance of civilization.

A man from Regina who is visiting in Eastern Canada refers to the startling increase in the number of rats in the West. There was a time when most of the country beyond the Great Lakes was free of these rodents. While they were numerous in Eastern Canada for many years, they seemed to avoid the new districts although there was unlimited attraction for them in the amount of grain available everywhere and of which they are very fond. Eventually a few were carried westward, presumably in returning freight cars that had carried grain to eastern ports. Then the trouble was on in earnest, for vast quantities of wheat in elevators and warehouses throughout the West were an irresistible magnet. Not alone did they come from the east, but the growth of Vancouver as a seaport was an incident that meant the importance of oriental rats that are a genuine danger in any country. They are said to be carriers of disease, including that scourge of Asiatic countries, known as bubonic plague. These rats are of large size and have a most voracious appetite. It is easily imagined how destructive they can become in a country where grain is so plentiful.

It is scarcely understandable that human beings have remained so tolerant of the rat. The latter has increased its power over community in the world except the polar regions. Even in a country of limited population, such as Canada, the depredations of rats cost millions of dollars annually. Occasionally in the larger cities there are campaigns organized for their extermination, but there is no sustained organized national effort anywhere to eradicate these destructive and dangerous pests. It is no exaggeration to say that governments could afford to spend large sums of money in efforts to eradicate the rat and in doing so they would accomplish an economic miracle.—Woodstock Sentinel-Review.

Profitable Grain Production

Quarter-Section Farm Too Small For Profitable Operation

Farmers' budgets, for economical what production is the title of one chapter in the bulletin on the cost of producing farm crops in the prairie provinces, issued by the Dominion Department of Agriculture. The bulletin gives some the probable expense of raising a bushel of wheat on a quarter-section farm, and have been prepared in the main from information drawn from other chapters of the bulletin, representing what results might be expected from operating various sized grain farms. The calculations are subject to modifications depending upon local conditions in different districts but are founded on the average of the cost of production and total net return. The size of the farm is undoubtedly an important factor in profitable grain production. The quarter-section farm seems entirely too small for this purpose, the reason being that the overhead costs for equipment and labor are altogether too high, while the revenue obtained is much too small. The cost of producing wheat on such a farm, with an average of 18 bushels per acre, would be approximately \$1.00 per bushel.

Seasonal hours are quite apparent, too. In warm weather, hats, coats and gloves are deposited on vacant seats and forgotten. Children, during school days are continually leaving books. At Christmas, gifts by the score are sent into business's department.

The strongest thing turned in to other things was a pump-jig which had either been lost or abandoned. Other articles found included shoes, clocks, baby bottles, and even father's liquor bottle.

University's New Policy

Doors Opened To All Who Might Profit By Study

Doors of the University of Chicago were opened to "all who might profit by study," regardless of whether they have had previous academic preparation. President Robert Maynard Hutchins announced.

The university's new policy permits enrollment of students at large. They may participate in university studies without necessity of working toward a degree and without academic requirements. Intellectual capacity is their only qualification.

Electrical experts have designed apparatus that photographs a human heart in action, showing any changes in the rate of pulsation and other features that may indicate disease.

A volcanic lake which boils at one end and freezes at the other has been discovered in Unimak Island, Alaska.

Australia will send 5,000,000 boxes of apples to England this year.

Choosing A Vocation

Something To Think About, When Selecting Your Life Work

Professor Ellsworth Huntington, of Yale University, uttered a statement the other day that suggests that perhaps we have been overlooking a good guide in the business of choosing a vocation. Said this educationist: "An intellectual is no more desirable to society than a good craftsman, a good mechanic or a competent farmer."

An Octavo paper, commenting on this remark: "This is something which it would be well to impress upon young minds, at a time when they are selecting their life work. In the past the tendency has been to urge our brightest boys and girls to study for the professions. The result is that there are many doctors and lawyers who should have been mechanicians, and many mechanicians who would have made excellent professional men, if they had received the proper direction in their youth. The result of this tendency in education is seen to-day, with so many young men in the cities out of employment with no chance of becoming engaged in congenial work for which they are suited."

Possibly we need a reorientation of thought on this business of deciding upon a vocation. Perhaps an "old order" should yield place to "new." The "old order," to be more correct, the old conception, of a profession—such as being a doctor, lawyer or clergyman—was more "re-spectable" than in the eyes of a boy of an aptitude at a trade. A white collar and tie and blue serge suit, with shoes polished to a mirror, was more impressive in the eyes of a boy in a dealer's hand than an apron man at a trade. A white collar and tie and blue serge suit, with shoes polished to a mirror, was more impressive in the eyes of a boy in a dealer's hand than an apron man at a trade. A white collar and tie and blue serge suit, with shoes polished to a mirror, was more impressive in the eyes of a boy in a dealer's hand than an apron man at a trade.

It is to be remembered, of course, that in these times, neither the professional man nor the mechanic is doing any too well. One may be well off as the other, and no more so.—Regina Leader-Post.

Women Most Forgetful

Leave Almost Anything On Street Cries States Detroit Official

Everything from soap to pins gets lost or forgotten by ethereal-minded street car riders who blithely ring the stop-bell and wander off without one or more of their possessions. Maurice F. Sullivan says, and he ought to know, as he is the Detroit street railway lost and found department. He says most of the lost property belongs to women. Men and children are not missing from the offenders' ranks, however. But as a rule, Sullivan declared, women are the worst.

"Sometimes I think that women, if they give them enough time, will lose almost anything," he said.

"Furries, umbrellas, lingerie, love letters, handkerchiefs, keys, are found on cars and buses returned to owners and garages." How a woman could possibly lose her wedding ring was beyond him, Sullivan said.

Seasonal hours are quite apparent, too. In warm weather, hats, coats and gloves are deposited on vacant seats and forgotten. Children, during school days are continually leaving books. At Christmas, gifts by the score are sent into business's department.

The strongest thing turned in to other things was a pump-jig which had either been lost or abandoned. Other articles found included shoes, clocks, baby bottles, and even father's liquor bottle.

Just Dictated

Old Negro Witness Hearsly Knew Wrote His Own Name

Assistant U. S. Attorney Thomas J. Ruddy was attempting to show the incompetency of an old negro as a defense witness.

"What is your name," he asked. "Jesse Emory George Washington."

"Do you know how to write that name?"

The negro scratched his woolly head. "Well, mah," he ventured, "ah heah, never writes, ah just dictates."

A human body does not exceed 118 miles an hour in falling from any height, according to U. S. army statistics.

Some factories in Scotland have started an "all-British-labor" movement.

OCCASIONAL WIFE

By EDNA BOB WEBSTER
Author of "Joretta," "Lipstick Girl," etc.

SYNOPSIS

Camilla, Heide and Peter, young and in love, marry secretly, desiring to live their own lives apart. Peter is able to provide for them. Peter is a young, struggling sculptor trying to win a commission for a scholarship abroad and Camilla is the mother of his daughter. Heide is the sister of the same age and is a student of Camilla's art in the hope of landing an agency job. Others in the story are Avia Worth, another wealthy girl who is trying to win the love of her former fiancé, and her mother, Mrs. Worth. At a party at an exclusive club where the rest of the members of the party are a cabaret to continue the party, Peter and Camilla slip off the beach by themselves and fall asleep on the sand. When they awake it is to find themselves alone. Avia and another boy are standing near them. Peter and Camilla are shocked and Avia to announce before the party that she and Peter are married. Camilla urges Peter to accept some of her money to help him find a job, but Peter refuses. After Camilla has given from the studio, Avia's mother calls and tells Peter to accept a loan of \$10,000. Peter has his own exhibit and Camilla has her own. Camilla suggests "Eager Youth," and Avia "Inspiration." Camilla adopts the latter title. Camilla, Heide, goes to Peter's studio for quiet and to think. Peter and Avia follow him. The lights are turned on, see the status have been shattered to pieces. Avia blames Camilla of doing this, and Camilla, stunned by the disaster and hurt and horrified by the accusation, faints.

At Camilla's suggestion, Peter enters as his exhibit a statue he had sculptured especially for her as a wedding gift. They named it "Land of Hope."

(Now Go On With The Story)

CHAPTER I

Avia was one of the first visitors at the museum when the exhibit opened the following week. Her eager, anxious inspection of the vast gallery filled with sculptured pieces, which have indicated that she was one of the most ambitious of the entrants. Her eyes scanned one side of the room hurriedly, and she was out of her seat. Even in that brief interval of suspense, her heart sank with the dread of disappointment, before her eyes found that object for which they were searching impatiently.

"Yes, there it was. Peter's 'Land of Hope' had made the exhibit. It had been accepted for display with the best by the selecting committee, this crossed the room quickly to examine the card which hung from the pedestal group. The data was accurate. There would be another week of suspense before the final award of the scholarship prize. She must help Peter to endure it, somehow. Of course, she hadn't much hope now for Peter's chance of the reward. She was only happy for the alone work she could place had been accepted. That should encourage him.

Besides, she now had an alternative to her first plan involving the removal to Paris. How fortunate that she had thought of suggesting that Peter could do some work for her to meet his loan from her. Had she made the suggestion now, he might have suspected that she was prompted the plan. As it was, she

Ask Mother—She Knows

Mother took this medicine before and after the babies came and gave her more strength and energy when she was weary and rundown. — kept her on the job all through the change. No wonder she feels so much better.

LYDIA E. PINKMAN'S VEGETABLE COMPOUND

W. N. U. 2053

already had arranged for his services if he did not go to Paris.

The idea presented two advantages: instead of relieving him of his indebtedness to her, it would practically double his obligation to her, in the light of gratitude. Not only would Peter feel obligated to her for the loan of money, but for the opportunity to repay it with his own work. He also would see that enough work friends placed orders to add considerably to that obligation. So, she still held the advantage—even without Paris. That would be but a small step when she had won Peter's complete.

Paris, Rome, Athens—everything would be theirs to command, then. Her thought merged into the present tense, no conflict was she of the future.

So engrossed was she in her plans that she almost collided with Peter in the corridor as she was leaving the exhibit room.

"Peter!" she exclaimed. "It is not even granting him the thrill of discovering it for himself.

"You are a clever woman," he said, "but I see your eyes betrayed his claim. 'I'm surprised.'"

"Oh, I'm not. It is a marvelous thing," he said. "You might as well say it has no chance with the others."

"You are a clever woman," he said, "but I see your eyes betrayed his claim. 'I'm surprised.'"

"You are a clever woman," he said, "but I see your eyes betrayed his claim. 'I'm surprised.'"

"You are a clever woman," he said, "but I see your eyes betrayed his claim. 'I'm surprised.'"

HOLDS FALSE THEE TIGHT AS CEMENT

Place one's possibly also, your finger under the thumb—hold it tight as you can. You will see that it is actually held tight as you can. Hence money, but for the small—special occasion—president—your success. It all depends on you."

"Plans are only great if they work out to the proper advantage."

"And what is that advantage?"

"Your success. It all depends on you," she replied, with more significance than he knew.

"That suits me."

They were standing outside, now, beside her smart coupe, parked at the curb. "I'll drop you at the studio," she suggested.

"Thanks a lot. But I'd rather walk, to help work of some of this newly acquired things. I'll be back in one time. Did you ever feel giddy with inspiration? Well, that is my present condition," he grinned. "Besides, I want to drop in somewhere right away and 'phone Camilla the good news. She will be anxious to hear."

"Oh, I'm not. It is a marvelous thing," he said. "You might as well say it has no chance with the others."

"You are a clever woman," he said, "but I see your eyes betrayed his claim. 'I'm surprised.'"

"You are a clever woman," he said, "but I see your eyes betrayed his claim. 'I'm surprised.'"

Sink Great Shaft

Would Bore Deep Hole In Earth To Tap Unlimited Power

The boring of a great hole into the earth, with all mankind lending a hand to the job, was suggested here by the American Association for the Advancement of Science in a paper prepared by the late Dr. C. E. Grunsky, president of the California Academy of Sciences.

The paper was read by Dr. P. N. McFarland, vice-president of the California academy, who succeeded Grunsky upon the latter's death June 1.

Dr. Grunsky's thesis said that mankind would sink the great shaft as far as human ingenuity would permit, the results would fully repay the effort.

The centre of the earth is a great reservoir of power, if it could be tapped, gaseous pressures of 500,000 pounds a square inch would be the result.

Dr. Grunsky did not conceive that man could borrow down very closely to the central core of the globe but suggested a great co-operative effort would result in penetrating the outer crusts to a vastly greater depth than ever before—depth he thinks could be reached which would tell science many valuable things.

THE RHYMING OPTIMIST

By Aline Michiels

TWO YEARS OLD

With eyes like heaven
And hair of gold,
This boy is given,
Now two years old!

When have we caught this
Power, this song?
This boy has brought this
Good luck so long!

Here is beguiling,
Embodying truth,
Like April's smiling,
No taint of earth!

This trust is given
For us to hold;
"Ode, sweetest, but you take
Heart pure as gold!"

Another Useless Invention

Cellulose Lining For Bathing Tubs

Eliminate Rings

"No more rings around the family bathtub."

This is the promise held out by Robert I. Lusk, Long Wharf ship model maker, who, in spite of the handicap of having a crippled arm, has patented an invention which should do much in the way of preventing domestic discord arising from those rings which add nothing to a bathtub's beauty.

The invention consists of a specially treated waterproof cellulose lining which can be instantly loosened from the inside of the bathtub by means of a rig-cord when the bather is through.

The wireless telephone station at Montreal has three distinct fields of investigation: (1) mechanical farm equipment, used for production and marketing of crops and the handling of livestock products; (2) farm structures, including the farm dwelling and buildings for the storage of crops and the improvement of existing farms for profitable agriculture.

Even small towns and rural districts in South Africa are feeling the prosperity wave.

HUGE TELESCOPE DONATED TO ROYAL OBSERVATORY

Putting into circulation one kindly trust about some other fellow is a fine day's work.

A new type anchor, having only one point and no crossbar, invented in England, has at least twice the pulling power, in proportion to weight, of any anchor now used on ships.

An eighty-year-old battle between a young male and a pine tree at Valdosta, Georgia, has resulted in the death of the pine tree, which was the older of the two.

Putting into circulation one kindly trust about some other fellow is a fine day's work.

Agricultural Notes

Many Items Of Interest To The Western Farmer

For the first time in two years, fresh beef is again being imported into Japan from Canada.

The complete grazing capacity of Canadian county and terminal livestock, public and private combined, is about 418,000,000 head.

The progressive make of branded beef is available in the following figures: (1831) 37,240,746 pounds; (1932) 21,748,706 pounds; and (1933) 30,882,669 pounds.

Once the stem of an elm tree has been attacked by Dutch elm disease which has broken out in the United States, feeding can be done to save the tree.

The history of agriculture in Western Canada is comparatively brief, and previous to the last 50 years was practically confined to Manitoba.

Canada moved up from seventh to fourth place among Great Britain's sources of imported bacon in 1932, and, excepting the Irish Free State, made Canada the only appreciable source of Empire supply.

While oats form the principal and most important cereal crop for livestock feeding, but little very poor feeding and indigestible, containing only about 3 per cent. protein and over 10 per cent. starch.

The Feeding Stuffs Act states that in meat products in which the phosphoric acid content exceeds 10 per cent, the word "bone" must appear in the description, thus, "Digester meat and bone tacks." "Meat and bone meal."

Under the 1933 revision of the Grain Act, it was possible to have approximately 2,000 different classifications of Western Canadian grain, under classifications then in use.

Next to wool, which is the greatest of Australia's primary industries, each year approximately 225,000,000 rams lambs go into the feed lot in the provinces of Saskatchewan, Alberta, and British Columbia. At time of sale, the average lamb weighs about 60 pounds and when finished for market they weigh from 90 to 100 lbs.

What the Co-operative Committee, composed of representatives of the Dominion Experimental Farms System, the Ontario Agricultural College, and Macdonald College, St. Anne de Bellevue, are doing in the study of the pasture problem is another example of the value of co-operative approach to an important problem of vital concern to the farmer.

A peculiar form of irrigation is practiced in some parts of northern India where the soil is so sticky that it is known as "root". The best lands are heavily flooded up to a foot or so in depth when water is available in the hot weather. The water is cultivated as soon as the bullocks can walk on it and good crops are obtained.

Agricultural engineering research has been carried out in three distinct fields of investigation: (1) mechanical farm equipment, used for production and marketing of crops and the handling of livestock products; (2) farm structures, including the farm dwelling and buildings for the storage of crops and the improvement of existing farms for profitable agriculture.

Even small towns and rural districts in South Africa are feeling the prosperity wave.

Little Helps For This Week

"I would have you without carefulness."

O Lord, how happy should we be if we could cast our care on Thee. If we from self could rest; And feel at heart that Our above is perfect wisdom, perfect love, in working for the best.

Cast all thy care on God. See that all thy cares be such as thou canst cast on God, and then hold none back. Never brood over thyself. Let God take up thy burden. Cast everything, even this very care which distresseth thee upon God. Be not anxious about little things if thou wouldst learn to trust Him with thine all. Act upon faith in little things. Commit thy daily cares and anxieties to Him, and His will strengthen thy faith for greater trials. Rather give thyself into God's hands, and so trust Him in the care of thee in all lesser things as being His, for His own sake, whose thou art.—E. B. Pusey.

Seems To Be Unwise

Manchester Guardian Comments On World Destruction Of Food

In any case, to an economist from the world, the whole wave of restriction—that is the deliberate destruction of food and raw materials—whether under the direction of Mr. Bruce or of Mr. Elliot or of Mr. Roosevelt, are appearing fantastic. In nearly every country during the past few years, in the name of gold standards or balanced budgets, the standard of living has been raised. The people have been steadily forced down. Even in the pre-war era in Great Britain, signs of restriction among children were not lacking. Do we then encourage the farms of the New World to send us cheap bread, butter, and meat? No, we invite them to destroy it. The word has gone forth that cheap food is a curse—Manchester Guardian.

Folk Song Director

George Hasnan, Known To Ukrainians Throughout Canada, Is In

Ukrainians throughout Canada will be grieved to learn of the serious illness of George Hasnan, so well known to many others as well as his own countrymen, for the folk-song choruses he has trained in all parts of the Dominion.

Mr. Hasnan was one of the members of the famous Kohech choir which sang at the Ukrainian festival for six years. He has been a great inspiration to the Ukrainians in Canada. His last public appearance was in Kingston in March. He is in St. Joseph's hospital.

Mr. Hasnan is a graduate of the Royal Agricultural College of Canada. For a time he farmed near Hamilton.

Girl Lawyers From India

Two girls from India have taken up law in London. Miss Ballavilla, a young Parsee, is practicing as a barrister, and has just handed a divorce case before Sir Boyd Merriman. She comes from a lawyer family in Bombay, speaks English fluently, and has been in her native country, a purple air.

The Canadian Shield

The central part of Canada is underlain by a great, expanse of very ancient, hard crystalline rocks known to geologists as the Canadian shield. This has an area of about 2,000,000 square miles, or more than half that of the whole Dominion.

Talk is cheap—otherwise some people would be bankrupt.
